Teleportation jutsu in japanese

By using this technique, users can teleport in an instant..... to the location marked. Volume #27, Naruto Chapter #240 Naruto Shippūden Episode #119 Naruto Shippūden the Movie: The Lost Tower Naruto Shippūden: Anime, Manga, Game, Movie Ninjutsu, Space–Time Ninjutsu Flying Thunder Formation Technique Tobirama SenjuMinato Namikaze The Flying Thunder God Technique is a space–time ninjutsu created by Tobirama Senju Senju. [2] Overview of the Minato formula (left) and the Tobirama formula (right). Before the Flying Thunder God Technique can be performed, users must first mark the target with their engineering formula (式, jutsu-shiki). [1] The formula is applied after the most festive touch and cannot be removed; it will remain in place even after the user dies. [3] There seems to be no limit to how many targets can be marked with an engineering formula, as Minato Namikaze routinely uses dozens at once. [4] By inserting dimensional voids, users can teleport directly to the location of the engineering formula whenever they want, regardless of distance. [5] For the audience, it may look like a Body Replacement Technique, but the Flying Thunder God actually has more in common with the Summoning Technique. [1] Anything held, contacted, or associated with their chakras will teleport with them,[6] but this requires additional chakra to be performed; Very large objects can require so much chakra to put a limit on how far the user can teleport. [7] Users can choose to teleport to different locations from objects,[8] or they can teleport objects without teleporting themselves. [9] In combat situations, the Most Effective Flying Thunder God can be used by marking the opponent's body with a technical formula, allowing the user to teleport to them at any time: when a marked opponent tries to attack, the user can attack them first; [5] When a marked opponent tries to escape, the user can immediately appear on their side. [10] Tō no Sho equates this with jūinjutsu, where anyone marked with a technical formula is essentially sentenced to death. [1] When trying to find an opportunity to tag an opponent, the Flying Thunder God also gives users defensive options, as they can teleport away from the opponent's attack. To take advantage of this, the engineering formula is often applied to projectile weapons, such as the Special Kunai Minato, which can be quickly scattered around the battlefield to create multiple teleportation destinations that can escape to and then be attacked from. [11] Tobirama and Minato are renowned as the fastest shinobi of their lifetime. [12] Although both were very quick themselves, the Flying Thunder God also contributed to their fame. During the Third Shinobi World War, widespread use of the Flying Thunder God caused his moniker as the Yellow Flash of the Konoha;[1] he would randomly appear behind enemy lines and, by seemingly being in many places at once, removing the entire previous squadron have time to react. [4] By combining their naturally good reflexes with the Flying Lightning God instantly, Tobirama can intercept and divert the center blast of the Truth Finding Ball[2] and Minato can escape from Kamui mid-capture. [13] Minato's ability to avoid the A Lightning Release Chakra Mode led A to dub Minato the fastest ninja alive. [14] When Tobirama and Minato were revived during the Fourth Shinobi World War, they connected the Flying Thunder God network to each other, allowing them to teleport to other engineering formulas. [15] Together, they developed the Flying Thunder God Mutually Instantaneous Revolving Technique, which allowed them to swap places with each other in battle to arrange different maneuvers. [16] During their lives, the two developed their own variant of the Flying Thunder God: Tobirama had a Flying Thunder God Slash, which he used to stab opponents as he teleported to their side; [17] Minato has Flying Thunder God: Guiding Thunder, which creates a barrier in front of him that teleports attacks into different locations. [18] Trivia The name Hiraishin is also a phonics of the Japanese word 避雷針, which means lightning rod. This may indicate the reason why the technique is restricted to seals, since lightning is attracted to lightning rods. The Flying Thunder God Technique is sometimes referred to as the Body Flicker Technique,[3] despite the fact that they are fundamentally different. Minato inserted the sign of the Flying Thunder God into his wife's seal, allowing her to immediately help him when needed. [19] Although it is said that the engineering formula cannot be removed, its markings have disappeared from individuals who have followed the beasts sealed into them[20] and extracted from them. [21] In the anime, Minato's engineering formula seems to say 忍 (nin), love (忍, ai), of (之), and sword (剣, ken). Tobirama is more reminiscent of the formula used for seals - a random assortment of Kanji, Hindi scripts, and other symbols. In video games, the use of The Thunder God's Technique of Flying Minato creates a yellow flash, referring to his nickname. To activate this technique, the user places a special seal or formula technique (式, jutsu-shiki) to mark the intended destination. Once this is complete, they can quickly enter the vacuum of dimensions that instantly teleport them to the location of the seal. Marks can be applied to almost any area through brief physical contact, including opponents or surrounding features. Because this technique is able to affect anything that comes into contact with the user or is somehow connected to their chakra, they can also use this technique to teleport objects or others, although the object size and distance of location determine the required amount of chakra. As Minato also noted, the tagging formula never disappears from the marked target. His creator UsageTobirama SenjuAs, Tobirama's skill with this technique, combined with his natural speed and reflexes made him hailed as the fastest shinobi of his time. As a general basis of this technique, Tobirama uses a unique seal to mark the desired target, tool, or location to teleport itself instantly. With that, he was not only able to deflect Obito Uchiha's Truth Finding Ball but also return it to him before it could develop. He is also skilled enough to teleport not only himself, but others along with him. From this technique, Tobirama can also perform techniques such as Flying Thunder God Slash - a technique that praises the prowess of his bukijutsu by combining instant teleportation of this technique, capable of landing mortal wounds on Izuna Uchiha. One of these derived techniques is Flying Thunder God Mutually Instantaneous Revolving Technique, which allows him to switch places at any time with other users of the Flying Thunder God Technique he has marked. Tobirama also demonstrated the ability to apply his seals to ordinary kunai, giving them functions similar to the Kunai God of Thunder Flying Minato.He can also connect his Flying Thunder God Technique with the marks of other users, allowing him to jump or even send individuals to their mark location, or connect to his chakra without going physically with them alone. Minato NamikazeDue to With this technique, Minato Namikaze obtained the moniker of the Yellow Flash Konoha (木の古の古ically古, Konoha no Kiroi Senkō). Minato most often applies the formula first to the kunai in particular, which he will deploy throughout the battlefield when the fight begins, so that they can be teleported at any time. Using such tactics, Konohagakureeven proved victorious in the battle against Iwagakure during the Third Shinobi World War, despite being outnumbered, by appearing randomly to enemy lines, using his great speed to appear to be in several places at once and sweeping the entire squadron before they could even react. With his great reflexes, he can use Flying Thunder God — Second Step to teleport at short distances, allowing him to simultaneously dodge attacks and attack in the opponent's blind-spot. This technique — combined with Minato's incredible natural speed and reflexes — makes him the fastest ninja to ever live according to Ay. The technique is fast enough to even allow Minato to escape warped, although it has been partially sucked in, and avoids A's top speed attacks. Minato can also insert the formula into other seals, such as his wife, allowing him to immediately help him at any time. Minato also has the ability to send people to different marks simultaneously through direct contact with himself or his chakra. Minato shadow clones can use techniques to summon the original to its position. His prowess with this technique makes him a typical Minato technique. Minato - like Tobirama - comes from the original technique of this one. One of them is Spiralling Flash Super Round Dance Howl Style Three, where he uses flying thunder god technique combined with Clone Shadow Technique. He can also use Flying Thunder God: Guiding Thunder which can curve anything in contact, such as the Tailed Beast Ball. Minato can also use the Flying Thunder God Mutually Instantaneous Revolving Technique, which he did with Tobirama on the battlefield for a devastating effect on Obito Uchiha.TriviaAlthough is often compared to the Body Flicker Technique, the speed and range of this technique is much greater. Basically, this technique is more akin to The Summoning Technique than the Body Flicker Technique, as it revolves around the manipulation of the space-time continuum rather than simply accelerating movement. However, this technique is referred to as The Body Flicker Technique (の古, Shunshin no Jutsu) on different occasions. The name Hiraishin is also a phonics of the Japanese word 避雷針, which means lightning rod. This may indicate the reason why the technique is restricted to seals, since lightning is attracted to lightning rods. This technique can create smoke similar to the Summoning Technique, but that is not always the case. In the video game, the Flying Thunder God Technique is shown to yellow flash when Minato jumps with him with him his nickname. Although Minato himself stated there is no way to remove the mark for this technique (including the death of the user), there are two rare instances where the mark has been removed. In the anime, the engineering formula (忍式, jutsu-shiki) on Minato's special kunai seems to say 忍 (nin), love (忍, ai), from (之), and sword (剣, ken). Tobirama is more reminiscent of the formula for Summoning Technique or Fūinjutsu. Fūinjutsu.
